BACKYARD ELEMENTS

Where The Pros Go For Outdoor Living

Dallas | Fort Worth | Houston | Austin | San Antonio

BACKYARD ELEMENTS

About Us

At Backyard Elements, we are dedicated to helping building pros deliver on the outdoor living dreams of their customers. As the outdoor living partner for many Home Builders, Remodelers, Pool Builders, and Landscape Contractors, we design and build custom outdoor kitchens and fire features. Our process for doing so is different - we use proprietary products to achieve maximum efficiency by drastically cutting build times, eliminating trade callbacks, and mitigating your liability.

Outdoor living has been our focus for over twenty years. We started as outdoor living contractors with a design/build construction company focusing on backyard remodels. During that time, we learned the importance of efficiency. Efficiency is the only true driver of profitability that a building professional has. Without efficiency, profits quickly disappear!

We think you will find our products and services for building pros a refreshing change. Ultimately what we do is allow you to focus on what you do best, while we handle the details of building these critical Backyard Elements.

BACKYARD ELEMENTS

From the homeowner's perspective, an outdoor kitchen **is viewed as an experience...**

As a result, it is important that we work closely with the builders and contractors to understand the homeowner's ultimate outdoor experience, and design the space around their dreams.

Just like with our Fire Pits and Fireplaces, we use a proprietary cabinet system to build all of our outdoor kitchen structures. The modular nature of our system allows us to efficiently build any shape or size structure necessary. Additionally, our modular system is built using a galvanized steel frame with a cement backerboard shell. Once assembled on site, the cabinet system is designed to be finished with just about any type of veneer materials, from stucco to stone, so that the finished project matches seamlessly with the home or pool and doesn't look like an afterthought.

BACKYARD ELEMENTS

Fire features become major focal points while providing **ambiance & functionality...**

Fire features have become much more popular with homeowners in recent years because they provide warmth while adding atmosphere to your outdoor living space.

Just like our Outdoor Kitchens, we use a proprietary cabinet system to build all of our outdoor fire features. Our cabinet system is built using a galvanized steel frame with a cement backerboard shell. Once assembled on site, the cabinet system is designed to be finished with just about any type of veneer materials, from stucco to stone, so that the finished project matches seamlessly with the home or pool and doesn't look like an afterthought.
